Experience

Featured Projects:

-Coffee Shop - eCommerce site where users can sign up, log in, and order weekly coffee bean subscriptions, MEAN stack

repo: <https://github.com/csdaniel17/coffee-app> | demo: <http://danielcoffeeapp.surge.sh/>

- The front-end uses AngularJS, as well as Bootstrap for design.
- The backend of this project uses MongoDB, Express, and Node, where I encountered problems attempting to convert the callbacks to promises. I wanted to use promises in order to clean up the amount of error handling necessary, however I ended up with so many nested promises. I was able to use the npm module bluebird to return a fulfillment array that could be used later. Another problem was ensuring the encryption of the passwords, which I was able to solve by using the my-bcrypt module.

-Rate the Throne - a public restroom rating app, Google Maps API, JavaScript, and AngularJS

repo: <https://github.com/DigitalCrafts-May-2016-Cohort/rateTheThrone> | demo: <http://ratethethrone.surge.sh/>

- I worked on this project with a team of three others. We utilized SCRUM and agile methodology to create the MVP in a week.
- We encountered problems when attempting to match the Google Maps place ids with the list in our data file, which was solved by writing a function in order to connect the two to make sure we were using the correct ids.

-Draw Together - a drawing app where users on multiple computers can draw together, Express and Socket.io

repo: <https://github.com/csdaniel17/draw-together> | demo: <https://draw-together-duhowphuwa.now.sh/>

- Using Socket.io, I was able to connect the client and server in order to be able to draw on the same canvas, even on different computers. I encountered a problem when attempting to create a way to reset the drawing board. Originally, I used a jQuery call to fill the canvas, however I needed to emit it to the server side for it to finally work on both sides.

The Dian Fossey Gorilla Fund International, Atlanta, GA

-Manager of Web Development, July 2015 – March 2016

- Managed the website, including coordination of web projects across departments to maintain fresh content and cohesion of brand
- Managed the eCommunications schedule for the entire Development and Communications departments
